ness, a *pas de quatre*, quite peculiar, in being on masculine. Dancing about an Emperor to plead the case of a King is a mode of intercession which we imagine to be adopted in actual political life, should never have expected it to be practised at court but that of some potentate in a ballet-

MELBOURNE.

[FROM OUR CORRESPONDENT.]

October 18th, 1855.—Hitherto the whole business of the election has been conducted in a most orderly and equitable manner. The peace and order which prevailed in Melbourne have been, however held, no guarantee of the maintenance of similar decorum by the more free and easy discussion of the election in the House of Victoria. The peace and order which prevailed in Melbourne have been, however held, no guarantee of the maintenance of similar decorum by the more free and easy discussion of the election in the House of Victoria. The peace and order which prevailed in Melbourne have been, however held, no guarantee of the maintenance of similar decorum by the more free and easy discussion of the election in the House of Victoria.

prove useful in the improvement of the taste of our public and private edifices.

A quartz procured by Count Dombinski for fusion into a mass soluble in water has excited some attention here, and although experiments hitherto made have not been as successful as the proposals made to anticipate, there is no doubt a very important field of investigation opened up. It is well known to chemists that stones containing silica in large quantities are of a comparatively low temperature of fusion, and by the addition of certain other alkalies the result of the process being silicic acid, a substance deliquescent in the air, and of course soluble in water. The quartz having been reduced to small fragments and the residue of the process being water, it is many times its weight of carbonate of soda. The result is sticky substance, which dissolved in water of course dissolves whatever gold the matrix may contain. The residue is a mass of silicic acid. The gold, it is proposed to apply to a number of manufactures, ornamental or useful. The only question remaining unresolved is the expense of the process. Can the silicic acid be obtained at a small cost? The apparatus, with suitable premises for the operation form important terms to the question,—considering that the silicic acid which quarts would be compelled to yield its measure in the ordinary method, would cost a great many people, anxious to exhibit their knowledge, the price that they want of it. I have written letters to the Hon. the Governor, and to the Hon. the Chief Charge, against Count Dombinski is that he has taken his plan from Ure's dictionary. The Hon. the Chief Charge has taken his gentleman's claim to originality from the Hon. the Governor of the plan which certainly should be made the subject of careful enquiry and experiment.

VISIT OF THE GOVERNOR OF SOUTH AUSTRALIA TO ALBURY.

(From the Border Post, 4th October.)

On Wednesday morning, His Excellency Sir Richard Macdonnell and lady arrived in Albury, having succeeded in overcoming the difficulties of the road. The illustrious visitors were received by the Hon. the Chief Charge, and took up their quarters at the Government Hotel. On the following day the board of gentlemen waited upon his Excellency, and presented the following address:—

"To His Excellency Sir Richard Macdonnell, Knight, Governor-General of the colony of South Australia, &c., &c."

"May it please your Excellency,—We, the undersigned, residents of the town of Albury, embrace the opportunity of presenting to your Excellency our warm feelings of respect for your Embellishment of the colony, and to offer our congratulations on your arrival at Albury after a successful voyage."

"We are anxious to see beneficial results from your visit to this distant place, being convinced that the capabilities for the extension of commerce by steam communication of the great highway of the Murrumbidgee River, must impress your mind with a high opinion of its future importance, and that the ascending fertility and salubrity of the adjacent country only require continuous stream of immigration to make it the happy home of the elements of the industrious poor of another country."

"Trusting that the voyage has afforded a healthful relaxation, and wishing yourself and lady a safe return to the metropolis, we have the honour to be, Sir, your obedient servants."

HENRY ADAMS, Chairman.

His Excellency replied in the following terms:—

"Gentlemen,—I have cordially accept and entirely reciprocate the friendly feelings which you have expressed to you to present me with the address just read. The which most gratifies me in it is, the internal and individual interest which it affords of the providential arrangement by which commerce is so wonderfully advanced in South Australia and Albury may nevertheless be united by similar interest. It is in promoting commerce that I am thereby drawing closer the bonds of brotherhood which unite the colonies, and as members of the same human family, but not more so of the same race, and that the statesman and the philanthropist find on this continent the most glorious field for his career, and that the durable and as well as durable reward for the upright discharge of his duty. Impressed with those feelings, I can assure you my joy in finding such a noble highway through this continent, and that the waters of the great river which, flowing through the united cities with the distant colony whose government have the honour to administer."

"I am, Sir, your obedient servant, and I will frequently say always count on finding in me a high friend of every measure calculated to improve the natural advantages of the Murray, and if in so acting I shall prove to you to be a friend of the prosperity of your township, I shall have the satisfaction of my duty increased by my personal acquaintance with the natural advantages and beauty of your neighbourhood, and by my personal knowledge of some of its inhabitants, and the commerce and industry of Albury has been already so much improved."

THE DINNER.

On Thursday, a dinner in celebration of the arrival of the Governor of South Australia, took place at Layton's Royal Hotel. About fifty gentlemen were present. Mr. Atkins, the resident Magistrate, occupied the chair, and Mr. John Evans and Dr. Caspary acted as Vice-Chairmen.

The usual loyal toasts having been duly honoured, the Chairman then gave, "His Excellency Sir Richard Macdonnell and Lady," which was received with considerable enthusiasm.

His Excellency, in rising to reply, stated that:

Sir,—Some time ago I had the honour of informing you that I possess a means by which quartz is chemically dissolved, and all the gold, metallic oxides, and metals contained in it, precipitated.

By the use of this method of dissolution process, free gold has been obtained, will not only pay a constant extraction, but will in many cases leave a considerable profit on the operation. I further informed you that this residue of dissolved quartz would open up new branches of industry in Victoria.

I have now determined to throw my method open to

the pleasure, and in not knowing that I was
 the cause of my own death. The justice of the prac-
 tice of my method. I am convinced that there
 are more intelligent and enterprising men to be found
 in Victoria, proportionately, than in any other part of
 the world, and who will not fail practically to carry
 out my method, if it can be done.

2. By a nature and inclination fond of chemical
 science, as being pure and unadulterated, I feel some curi-
 osity to ascertain, some future time the sense of
 justice and liberality of the Victorian community.

My method, then, is the following:—One part of
 quarts in small pieces is, together with 24 or 3 parts of
 carbonates of soda, brought to a red heat and melted.
 Cast iron tubes are, perhaps, the best vessels in which
 this process can be done.

The product is formed, deliciousness in air.

This silicate of soda is dissolved in water, is uncolored,

By decanting it again and evaporating the water, it made fit for another dissolving process.

By adding the soda to the solution, the soda for regenerating the soda from the same fire which I make use of in combining the quartz and soda. This I do by employing the well-known centrifugal air pump, and by using an up shaft pump, as the late Mr. Melons in the deepening of a sugar-cane field of lime.

By infusing carbonic acid into the solution of silicic acid, I separate the silicic acid from the soda. The silicic acid is precipitated in the form of a transparent, jelly-like substance, which cannot be separated from water by filtration.

By evaporating the solution of carbonate of soda, which by means of evaporation I obtain again as dry carbonate of soda. As such it can be made use of in further operations.

By adding silicic acid in the form of a transparent, jelly-like substance; This product I now intend to view a little closer.

It can be employed in different ways: I will only mention a few.

It can be employed for the purpose of silicifying or petrifying wood artificially.

Wood, hating by means of hydraulic pressure been penetrated and forced into the pores of the wood, being warm-dried or destroyed by ants. This would

of impregnation for wood used in building, but particularly for sleepers used in the construction of railways.

Wood, simply wetted with dissolved silicic acid, is penetrated by it to the depth of about one-eighth of an inch, and will now take a fine polish of marble or other agate, giving it a most elegant appearance.

Mixed with lime, the dissolved silicic acid forms an extremely hard, insoluble, hydraulic cement, forming silicic acid lime.

If added to soap in certain proportions, it increases considerably its detergent qualities, giving it at the same time a very beautiful marble-like appearance.

When mixed with metallic salts, and other substances, it is used in the manufacture of the finest looking-glazes and

The glass is a solution, the silicic acid is in the most proper state to be, by means of a simple chemical process, reduced to silicium, a metal, perfectly similar to silver in colour, brightness, malleability, and ductility. The silicic acid is, however, nobler than silver, because, unlike gold, it is not attacked by acids, except by fluorhydric acid.

One ton of pure quartz contains about 980 lbs. of metallic silicium, the price of which is, at present, five shillings.

The transparent, jelly-like silicic acid, loses, like gypsum, by slight calcination its water of crystallization, and appears as a light, white, insipid powder of extreme hardness.

It is supplied to various uses, of which I only mention two in particular.

It forms, when mixed with oil, a perfectly white paint, which may be at a price very advanced advantageously substituted for white lead and zinc.

Looked at through a microscope, this white, insipid powder appears to consist of extremely small, rounded particles; it is of extreme hardness, and is therefore perfectly well adapted for grinding and polishing. It might, therefore, be substituted in many operations for the substance known under the name of emery, which is very expensive.

The soluble silicic acid may also be employed in various highly important ways.

These are the principal contours of a method which propose to employ for the extraction of gold from

I am afraid, Sir, I have already trespassed too much upon your space and time. What I have said already will, I believe, be sufficient to draw the attention of thinking men to the subject. For my part, I hereby declare that I am ready at any time to give every possible information and explanation to all persons interested in the subject, and who would, for the purpose of obtaining more accurate details, be desirous of entering into communication with me personally.

Sd. J. Dombarski will be pleased to direct, by letter, to South Dombarski, care of Mr. Schultz, 82, Great

I am, Sir, your obedient servant,

P.S.—The above detailed method of dissolving

quartz by means of carbonate of soda or potash I recommend as a sure means of ascertaining the average richness of quartz. The most reliable results as to the rate of gold contained in the quartz are obtained, and no particular apparatus is required—only a small cast-

the alkali can also be obtained again by precipitating the dilu-
 cide acid by means of lime.
 The following letters, commenting on this plan,
 appeared on the following day in the *Argus* :—
 (To the Editor of the *Argus*.)
 Sir,—Having this day perused an article on dis-
 solving *Herold*, which the *Herold* so glowingly
 describes in a "leader," signed "Count Joan Dem-
 mers," I beg to say that I have devoted my time and
 attention to the subject for the last six years in Vie-
 onna, Trieste, and Rome, and chemically dissolved - that any
 chemist knows - not only *Herold*, but also *Herold*.

Count's plan fully described in all its details in
 Brande's Manual of Chemistry, published in the year
 1818, page 1128, which work I have by me.

By inserting the above you will oblige your old
 subscriber,

LANGSTON WATT.
 Cremorne-street, Richmond, 9th October, 1836.

(To the Editor of the Argus.)

Sir,—I have read the letter of Mr. Dembinski in the
Argus of this morning, and I can with great confidence

First of all, he proposes to smelt the quartz with 2½ parts at least of soda. To smelt quartz in any way, even with a more powerful flux added, will take no less than about 3000 degrees heat at least (Fahrenheit) to smelt it. The expense, therefore, of the fuel alone will debar it from working, as it would cost more than here is gold in the rock.

Thirdly, for every 100 tons of quartz the gentleman proposes to have the 250 tons at least of soda. Really alone would want 20,000 tons of soda and a proportionate supply of coal.

Fourthly, to dissolve the molten mass, say one ton of molten stuff alone, how much water and vessels would it take? I suppose the establishment wants one mile of ground for operations.

I will restrict myself to the above remarks, as far as gold is concerned, which is the most attractive product of this colourable and noisy business.

stronger in flavour than the cultivated kind, grows wild in various parts of this State. The soil and climate are esteemed peculiarly favourable to its growth.—The hay cut upon the ranch which gave name to Grass Valley, will reach a hundred tons per season, and is worth at this time sixty dollars per ton.

THE *Daily Alta California* gives the following interesting historical notice of the career of Col Walker, the President of the Republic of Nicaragua, and of his present position:—

Mr. Walker, but a little more than a year ago, and now President of the *Sacramento State Journal*, and now President of the Republic of Nicaragua, is a man who has made himself great by the deeds they do, and, according to faith, Walker is certainly great. Loving San Francisco on the 18th of June, 1855, with fifty six dollars, he came to California, and after five years he was Rivas against great odds, and winning that, married into Grenada, the Sebastopol of Central America, took it almost without a struggle. Since that time surrounded by enemies, he has been able to stand his ground, and has driven from Nicaragua a powerful invading army, and after the defection of the native situated authorities, was elected by a large majority the popular vote, President of the Republic.

The man who has done all this, is a man worthy of palm of greatness. We have had occasion for you to watch the progress of William Walker. We know him first, when as an assessor editor of one of the papers of the city of San Francisco, and later of the *San Francisco Herald*. We knew him next, when for an expression of opinion in the paper with which he connected, he was imprisoned by a feeble institution Judge Jeffries, for a contempt of court.

We saw him again, when he fled to the Republic at Sonora, Lower California. In this movement he failed, returning here, was tried for a breach of our neutral laws, was acquitted, and soon afterwards organized a new Republic.

Now he is Nicaraguan's President. He is a glowing with all the inspiration of youth, and with vigor. He is modest and unassuming in his deportment. There is no affectation about him, and in his appearance or conversation. He is one of the quietest that could be met with in a day's journey, but possesses within himself all the elements of greatness.

As Nicaraguans he has already established his repu-

ment. That he has ulterior designs, we have no doubt, and we believe them to be a centralization of a confederation of all the Central American Republics. That he will succeed in this work, too, we doubt not.

doubt. It has given evidence already of his ability to perform what he undertakes, and we do not believe he will fail in this. By some it is supposed that his views reach even to Mexico, and that his ultimate sign is, at some time, to incorporate that Republic with those of Central America, and thus form a nation compact and impregnable. We have no advices in relation

Viewing Walker as he is, and viewing his report as it stands to-day, we can but regard him as one of the wonders of the age. In England his diplomacy already created a discussion, which at one time seemed ready to embroil us in a war with that country. We do not believe will come from any such cause. The same good judgment that has placed him where he is, will steer his course through the difficulties which surround him, and will, we believe, guide him to the accomplishment of his wishes and his designs in Central America.

SOUTH RIDING OF CUMBERLAND.

To the Editor of the Sydney Morning Herald.
Sir,—The letter of "Forward" in your issue of this date having put forward a feeble to Mr. Brennan, concerning his substitution of Mr. Donaldson for himself at the coming election, and alleging, as a parallel case, the desire of waiving his position in favour of Mr. J. H. Thomson, at a recent election, and further suggesting that, in that case, the electors would have the good of the country in view, and not the personal interests of the candidates, I would, as a parallel case, suggest that, in that case, the electors would have the good of the country in view, and not the personal interests of the candidates, I would, as a parallel case, suggest that, in that case, the electors would have the good of the country in view, and not the personal interests of the candidates.

Now, as I also prefer the steady line to its tactical opponents, I would, with your favour, be glad to be right, on one or two points, my brother electors of Norfolk, and I will venture to say, of the country, and who may be as sanguine as "Forward" is.

The ousting of Mr. Brennan by the Election Committee (just, and yet regular, as such ousting be regarded) cannot operate until the report of the committee be read by the Speaker to the Assembly, and then, after adjustment of the vote, the anticipated double return of Mr. Manning and Donaldson cannot be contemporaneous, but must be separated (if to be) by a considerable interval; thereby two new elections will be necessary, at which we can now tell what candidates may start.

Besides, the case of Mr. Brennan cannot be waived, his then claims in favour of Mr. Thorneau, and thus his now waiving his hat for Mr. Donaldson, are different things; y^t their distinction seems to be altogether overlooked by your correspondent, who has taken for granted that Mr. Brennan has adopted the *finesse* without the *faute* in it. Mr. Brennan is now sure of his return v^o.

declared unseated; the committee's decision has been arrived at on a mere point of formalism, which does not affect the candidate, and which, probably, ought not to operate as it now does. Brennan, therefore, as to his own seat, has the election district in his pocket, as the most popular candidate usually has. What he will do under the circumstances rests altogether with himself; but if he hearken to the "Forward" cry, and give his influence to Mr. Donaldson, he will assuredly, by that great act, "have done the State some service," and is very possible there may be some more.

If these observations have the effect of adding, by a feather's weight, to the probability of Donaldson's return to the Assembly, they will have accomplished the quiet object of the writer, and will be the more obliged by your courteous insertion of them in your excellent journal.

I have the honour to be, Sir, &c.,
Sydney, October 13th, 1856. H.

LOGIC IN THE HOUSE OF LORDS.—Is it possible

conceive any human creature, except an uncommonly irrational woman, holding such an argument as the following, ascribed, in a parliamentary report on the Lords' debate on the Jew Bill, to Earl Stanhope: 'I was also held that a man who had not an income of £300 a-year was disqualified from sitting in the House of Commons. Why, then, should there not be a qualification on religious grounds?' A writer of reputation for sagacity advises us to answer, and not to answer, a fool according to his folly. Let us exercise of the discretion allowed by this counsel.

will venture to reply to the question of the block of those words we presume to have been put into the mouth of Earl Stanhope. As a man is disqualified for sitting in the House of Commons on the ground of not having an income of £300 a-year, why, should there not be disqualification from sitting on religious grounds? Simply because the war of £300 a-year, or therabouts, is a pretty good re- why a man should be excluded from the House of Commons, and his religious opinions are a very reason. Unless he has an income of his own, he depend upon other people for a subsistence, and

highly probable that those other people who keep will, on many questions of practical importance, influence his vote to the public detriment. But it is highly improbable that his religious opinions will be the least influence, detrimental to the public, or vote, upon any question of practical importance. The mischief that religious opinions can do in the House of Commons is already done by those of Roman Catholic members, whose politics are servient to their Popery. That mischief is not a new one, or the Emancipation Act would very soon get repealed.

To ask why, if a man is excluded from the House of Commons for not having £300 a year, he should also be excluded on religious grounds, is like asking why, because poverty disqualifies him from membership of Parliament, red hair should not constitute the disqualification? We hope the above explanation of our remarks will meet the eye of the foolish pair who the reporter mistook for Earl Stanhope, and will put in some degree intelligible to that noble simpleton. At the same time we feel that an apology is due to the youngest of our junior readers, indeed to our readers generally, for insulting their understanding by the

SHAPEY SAM'S SPORTING TOUR.—That eminent, unusually lucky sportsman, Sam Wilberforce, with a little *contemptum* recently, while in search of game on the property of the late Bishop of Gloucester and Bristol. He put up a fine specimen of a *rare* and *Double Whitecap* (*M. tra. duplex*) of the natural and did his best to bring it down, designing to present to his friend, the Rev. Chevenix Trench. He missed his mark, and the prize ultimately fell to the lot of another sportsman.

ALL BUILDING ALLOTMENTS, adjoining Grantham House, Potts' Point, over the Harbour of Port Jackson, and Woolloomoolloo.

SALE by Auction, THIS DAY, at 11 o'clock, by EDWARD SALAMON, at his Rooms, Wynyard.

Terms, 10 per cent. deposit; the residue for an instalment of 7 per cent.

THIS DAY, 14th October.

and Valuable Suburban Building Allotments, &c.

R. EDWARD SALAMON will sell by auction, his Real Estate, Wyndham-street, THIS afternoon at 2 o'clock.

The following choice villa allotments, at Grantham, are available:

TS 81 to 6 have frontages to Villa-street of from 30 feet each, by depths varying from 85 to 110 feet. These really choice and beautifully situated allotments are arranged in a row overlooking the sea, affording an entire view of the harbour to the Heads on the site, and on the other overlooking the pleasure grounds and the town of Grantham. The position of this ground there is abundance of excellent stone for any purposes.

TS 79 & 80 are at the back of the above allotments, have frontages to the new line of Victoria-street, 90 to 24 feet each, by depths varying from 85 to 110 feet.

The view from these allotments is most picturesque, charming, overlooking Woolloomoolloo Bay, the Domain, and the city of Sydney. The allotments are all on level ground, and abounding with first-rate building material.

TS 15 and 16 have frontages to Victoria-street of 31 feet each, by depths of 70 to 80 feet.

TS 77 to 78 to form a corner allotment, having the same frontage as the above building sites the view is very comprehensive and suitable for business or residential purposes.

estate locality.
 T^his lot to 22 h^{igh} frontagers to Grantham-street of 30
 27 of a de^{sc} of 100 ft.
 These lots, which are likewise beautifully situated,
 the residence of J. P. Hilly, Esq., and being on
 the corner of Grantham-street and the main road.
